# Managing Weather Alerts

In-telligent's Severe Weather Warnings Group keeps users informed about inclement weather in their immediate vicinity. Users will be notified with an alert that overrides silent when a lightning strike touches ground within 5 mi/8km of their current location, or if they are within the direct path of a severe storm. If you wish to turn the override off for either of these alerts, select the “Menu” icon and then visit “Settings”.

# Managing Weather Alerts

Once in Settings, select the “Notifications” tab. From there, you can toggle off severe weather and lightning alerts using the switches.
